

Rotating

As you can tell, one of these pictures is not right side up. This is an easy fix, to a very common problem. Especially for photos that have been scanned in.

Rotating images

Out of the images that Photoshop just separated from “scan_pics.psd”, there is a photo that is not right side up. It is a photo of a man with children in the snow. Before we begin to work on this file we must first select this image. To do this...

- 1) Find the photo with the snow.
- 2) Click on that photo's title bar.

1) In Adobe Photoshop's menu Click on Image> Rotate Canvas> 90CCW

Of course, this photo needed to be rotated 90 CCW (Counter Clock Wise), but you may have a photo that needs 90 CW (Clock Wise). It all depends on your image and what it needs.

Close all three images now, without saving.
